

OPEN STANDARD · WORKING DEMO

Open Forecast Receipt

Make AI forecasts inspectable, tamper-evident, and portable.

AI Factory · native.builder · Future Edge Group

An AI forecast can quietly rewrite its own past

8:59 — An AI warns about a company.

9:07 — New results become public.

9:12 — The AI turns optimistic.

If the first forecast disappears, no one can tell whether the AI learned from new evidence — or simply erased its old answer.

**A dashboard shows what the AI thinks now.
A receipt preserves what it knew then.**

The live system can keep learning. The historical record must keep the original decision intact.

Open Forecast Receipt preserves that record so it can be inspected and tested later.

Forecasting already guides decisions with enormous stakes

Forecasting is embedded in agriculture, disaster response, markets, supply chains, energy, health, and public policy. No single market report captures the whole category.

ILLUSTRATIVE ECONOMIC STAKES

AGRICULTURE

CEREALS

EARLY WARNING

SUPPLY CHAINS

MARKETS

\$123B average annual
agricultural loss
from disasters

69M t cereals lost each year
to disasters

\$13B potential asset
losses
avoided annually

Forecasts cannot prevent every loss. Better warnings, transparent evidence, and honest evaluation still improve decisions.

FAO and WMO figures describe economic stakes, not losses caused solely by poor forecasting.

Each forecast becomes its own tamper-evident receipt

01 · SAVE

Preserve the forecast
Record what the AI predicted, when it predicted it, and what information it had.

02 · SEAL

Create a digital fingerprint
Change even one number and the receipt gets a different fingerprint.

03 · VERIFY

Add an optional public timestamp
A blockchain proof can show when the receipt existed — not whether it was right.

Example: one PepsiCo forecast from one iPulse AI advisor, preserved as its own receipt.

Change any saved value and the digital fingerprint changes.

The demo follows real AI forecasts from record to proof

iPulse AI is an investment research platform where 12 AI forecasters — called advisors inside iPulse AI — study the same asset independently. This demo preserves every forecast for five familiar assets.

THE FIVE PUBLIC DEMO ASSETS

60	separate AI forecasts	12	independent forecasters for every asset	20	quarterly estimates inside each forecast
-----------	-----------------------	-----------	---	-----------	--

Try it with PepsiCo: open one forecast → verify it → change one value → watch verification fail.

Logos identify demo assets only; no affiliation or endorsement is implied.

One receipt standard can power an Open Forecast Library

1 · RECEIPT

Portable receipt: subject · target ·
forecaster · timing · evidence ·
prediction path · digest

2 · TOOLKIT

Verify or prove: validate the receipt, check its digital fingerprint, and optionally add a public timestamp.

3 · LIBRARY

Open Forecast Library: [search](#) · [profiles](#)
· [payments](#) · [public track records](#)
across fields.

The prediction, context, and verification result are visible together.

Next: accept forecasts from any field and optionally add public blockchain proof.

OPEN FORECAST RECEIPT

Make forecasts accountable by design.
